

"The Remote Mount Booster" A Unique Brake Solution

An ideal choice if you have an older single master cylinder or dual reservoir master cylinder system and you want more power to stop your vehicle. A simple power brake solution when all other options are eliminated. There are times when there simply is no room for a standard modern power brake unit under the hood *or* you don't want anything on the firewall. At that point the PB900 provides the answer. *This unit can be mounted anywhere on the vehicle.* Past mounting locations have been on fenders, under seats and in the trunk, as long as you can run the hose and lines there are no limitations on placement. The PB900 includes a brake booster unit with a base bracket, "neck bracket" and 4' of vacuum hose.

Additional information and purchasing questions

- PB900 comes with the items pictured above, booster, base and “neck” brackets and 4’ of vacuum hose
- Depending on installation location, a longer vacuum hose may be required
- 3/16” brake line (fitting may be needed to accommodate your vehicle)
- Common mounting locations are fender, frame, firewall or by the radiator. If space or visual aesthetics are a concern, additional mounting locations are under seats and in trunk (longer vacuum hose needed in last 2 locations)

Unit dimensions are approximate: 9 ½”L x 7 ½”W x 8”H
