

# Power Brake Sales

## HYDROBOOST MASTER CYLINDER KIT

The vast majority of aftermarket hydroboosts are sold without the vital pieces to make the unit work. We think that's wrong and every hydroboost unit Power Brake Sales sells is complete! That being said there are a number of mechanics and gearheads who search for these vital parts in vain. Well you can stop searching because you have found your missing hydroboost parts!

**ATTENTION!!! THERE ARE TWO DIFFERENT SIZES AVAILABLE  
And THREE AVAILABLE KITS!**

- “Small” kits are for bore measurements 1.6-1.65” (~1 5/8”)      Part #129496SH-Kit
- “Large” kits are for bore measurements 1.8-1.85” (~1 3/4”)      Part #129496BH-Kit
- “Universal” kits include the “Spider” part for both sizes      Part #129496BSU-Kit

**DO NOT GUESS –MEASURE THE BORE**

Power Brake Sales offers both size kits and individual parts so we can supply what you need.

Our kits include the following with either the small or large spider/retainer, **or both**:

DESCRIPTION	PART NUMBER

**\*\*\*Long Pushrod information:**

Since the first automotive/truck hydroboosts started showing up in the early 1970's there have been many, frankly *way too many*, lengths of pushrods. Hydroboost pushrod lengths can vary as much as 3" depending on the year and vehicle and sometimes change more than once in the same production year!

Power Brake Sales has taken a common sense approach to this pushrod issue by supplying the longest length pushrod we are aware of in the last 50 years. We do this to help keep costs down for both of us and still supply 99% of the pushrods needed (there is always a 1% chance we haven't seen everything).

What this means for you is some measuring and cutting. The included instructions will tell you how to properly accomplish this small step.

Now that you know more than you ever wanted to know about pushrods Thanks for your time and for choosing Power Brake Sales as one of your automotive suppliers.

Respectfully,

"The Girls"

Kathy & Sandra
